

late cotton bolls and stopped further development, but conditions generally were favorable for picking and ginning, and this work made good progress. Later in the month it was unfavorably cool, cloudy, and wet in the northwestern portion of the belt, and picking was interrupted, especially in Arkansas and eastern Oklahoma where considerable open cotton was blown out by high winds. At the close of the month the crop had been mostly gathered, except in the more northern districts, though there was considerable still out in the northwestern portion of the belt.

*Miscellaneous crops.*—In the central and eastern portions of the country meadows and pasture lands continued generally good for the season, but in the more western States unfavorable drought persisted and heavy feeding of livestock was necessary in some sections. The weather was favorable for truck in the winter trucking districts, while citrus fruits in Florida were favorably affected by prevailing conditions. The latter part of the month was favorable for sugar cane in Louisiana, especially where windrowed, but harvest made good advance.

CLIMATOLOGICAL TABLES<sup>1</sup>

CONDENSED CLIMATOLOGICAL SUMMARY

In the following table are given for the various sections of the climatological service of the Weather Bureau the monthly average temperature and total rainfall; the stations reporting the highest and lowest temperatures, with dates of occurrence; the stations reporting the greatest and least total precipitation; and other data as indicated by the several headings.

The mean temperature for each section, the highest and lowest temperatures, the average precipitation, and the greatest and least monthly amounts are found by using all trustworthy records available.

The mean departures from normal temperatures and precipitation are based only on records from stations that have 10 or more years of observations. Of course, the number of such records is smaller than the total number of stations.

Condensed climatological summary of temperature and precipitation by sections, November, 1926

Section	Temperature								Precipitation					
	Section average	Departure from the normal	Monthly extremes				Section average	Departure from the normal	Greatest monthly		Least monthly			
			Station	Highest	Date	Station			Lowest	Date	Station	Amount	Station	Amount
